THIRD STREET CORRIDOR

SIDEWALK AND BICYCLE NETWORKS

The existing Sidewalk system in the Third Street Corridor is incomplete. The system is missing approximately 1,000 feet of sidewalk in the eastern end of the Corridor. Most of the missing segments are on the south side of Third Street east of the Blaine Street intersection. The completion of the system through the closing of the gaps with construction of new sidewalk is seen as a priority in the Corridor to ensure safe and complete pedestrian routes from one end of the Corridor to the other as well as providing complete walking routes to the Schools and the Park within the Corridor. Sections of the walk proposed to be constructed are shown in all three Plans.

In 2016 the City Council approved a Bike Routes and Facilities Plan which identified bike routes throughout the community. Multiple routes are located within and adjacent to the Third Street Corridor. Connections to those routes are part of the overall Corridor planning in order to accommodate all modes of transportation. The following shows a portion of the Bike Routes map in this area of the City.
